--- SUBCELLULAR LOCATION: Membrane; multi-pass membrane protein.

--- TISSUE SPECIFICITY: Expressed primarily in the bone marrow and cosinophils. Shows preferential distribution in cells of immunological relevance such as T-cells, dendritic cells, monocytes, mast cells, neutrophils. Also expressed in a wide variety of periphral tissues, including the heart, kidney, liver, lung, pancreas, skeletal muscle prostate, small intestine, spleen, fetal liver and lymph node.

--- INDUCTION: Expression is either up-regulated or down-regulated upon activation of the lymphoid tissues and this regulation may depend on the presence of IL-10 or IL-13.

--- MISCELLANEOUS: Does not bind diphenhydramine. Shows modest affinity for dimappit, impromidine, clobenpropit, thioperamide, burimamide clozapine, immepip and imetit. The order of inhibitory activity was imetit - sclobenpropit burimamide > thioperamide.

Clobenpropit behaves as a partial agonist, dimappit and impromidine show some agonist activity while clozapine behaves as a fall agonist. Thioperamide shows inverse agonist activity was inverse agonist. Theorem (inhibitory activity while clozapine was Histamine > N-alpha-methylhistamine > R(-)-alpha-methylhistamine > R(-)-alpha-methylhistamine behave as full
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NUCLECTIDE SEQUENCE [LARGE SCALE MRNA].

"Molecular cloning of monkey histamine H4 receptor.";
J. Pharmacol. Sci. 98:319-322 (2005).
-: SUBCELLULAR LOCATION: Membrane (By similarity).
-: SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: The H3 subclass of histamine receptors could mediate the histamine signals in CNS and peripheral nervous system. Signals through the inhibition of adenylate cyclase and displays high constitutive activity (spontaneous activity in the absence of agonist). Agonist stimulation of isoform 3 niether modified adenylate cyclase activity nor induced intracellular calcium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     IsoId=09Y5N1-7; Sequence=VSP 001884; TISSUE SPECIFICITY: Expressed predominantly in the CNS, with the greatest expression in the thalamus and caudate nucleus.                                                                                                                                                                                    Copyrighted by the UniProt Consortium, see http://www.uniprot.org/terms Distributed under the Creative Commons Attribution-NoDerivs License
            relative expression level varies in a region-specific manner. Isoform 3 and isoform 7 are highly expressed in the thalamus, caudate nucleus and cerebellum while isoform 5 and isoform 6 show a poor expression. Isoform 5 and isoform 6 show a high expression in the amygdala, substantia nigra, cerebral cortex and hypothalamus. Isoform 7 is not found in hypothalamus or substantia
                                                                                                                     modest affinity for thioperamide, imetit, N-alpha-methylhistamine and R(-)-alpha-methyllistamine. Isoform 4 is unable to bind to iodoproxyfan while isoforms 1 and 3 bind it with high affinity. SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                             nigra.
MISCELLANEOUS: Does not bind to cimetidine and tripolidine. Shows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (in isoform 4).
 various isoforms are mainly coexpressed in brain, but their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PS00237; G PROTEIN RECEP F1 1; 1.

                                                                                      INCOLOR 135-1; Sequence=Displayed;
Name=Short; Synonyms=H3S;
IsoId=090135-1; Sequence=VSP 001880;
-!- TISSUE SPECIFICITY: Expressed widely and abundantly throughout thbrain. Highly expressed in discrete neuronal populations such as pyramidal cells in cerebral cortex or cerebellar Purkinje cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                     -!- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
SÜBCELLULAR LOCATION: Membrane; multi-pass membrane protein.

                                                    ISOId=Q9QYN8-4; Sequence=VSP 001888, VSP 001889; TISSUE SPECIFICITY: Expressed abundantly in brain, most notably throughout the thalamus, the ventromedial hypothalamus and the caudate nucleus. Isoform i is largely predominant in all tissues. MISCELLANEOUS: Proxyfan acts as a potent neutral antagonist while thioperamide, ciproxifan and FUB465 act as potent inverse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   LPAEPROLLLPAPPGLGRWPCPACPVCTIRIWGWVVMG

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 2,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                    ......WKILCVTKWPALSQNQSVSS 391
